Title: Preterm Prelabour Rupture Of Membranes Close To Term Trial

Computer skills:

International Computer Driving Licence(ICDL): May 2008

Internationally certified leading computer skills

Membership of Royal College of Obstetricians and Gynecologist (MRCOG):

Part 1 MRCOG was passed in September 2012

TOEFL: December 2012

Score 104

Medical training

Internship (March 2008, March 2009):

One year of training in Assiut University hospitals in the following departments:

1. General medicine
2. General surgery
3. Gynecology and obstetrics
4. Pediatrics
5. Anesthesia and emergency
6. Radiology

Residency:

Three years of residency in Obstetrics and Gynecology in Woman's Health Hospital (Obstetrics and Gynecology Department) at Assiut University Hospital (the largest hospital in Upper Egypt). The Woman's Health Center is a new university medical center supplied with all modern investigative and therapeutic facilities. The hospital lies in Assiut city and is the main center to which complicated cases are referred (Tertiary Centre) from all governorates in Upper Egypt comprising around 20 million people. Moreover, this hospital is responsible for teaching and

Faculty of Medicine Assiut University

provision of research facilities. It includes inpatient wards and outpatient clinics in all medical specialties. The Woman's Health Center has 400 beds and about 20,000 deliveries are conducted annually. During the period of residency, the following training aspects were covered:

1. In the family planning clinic, I practiced and acquired skills in counseling, and application of different methods of contraception e.g. IUD, sub-dermal implants (both insertion and removal), etc. in addition to managing side effects and complications of different methods of contraception.
2. In the gynecologic outpatient clinic, I gained experience in managing common and uncommon gynecologic problems with the selection of patients suitable for operations and teaching.
3. In the low-risk and high-risk antenatal clinics, I gained skills in obstetric examinations, drug prescription during pregnancy and management of various medical disorders associated with Pregnancy.
4. In the inpatient section, the resident is responsible for 30-50 patients in every subunit for 3 successive months. He has to make ward rounds at least once daily, monitoring the required investigations, progress of disease and response
5. He is also responsible to present his patients daily to the staff members of the unit. We have 3 inpatient units; each has an Antenatal, Gynecology and Postoperative subunit.
6. In the operative theatre, I joined the operating theatre twice weekly to assist in or perform most of the gynecologic and obstetric operations. I have assisted in and performed many gynecologic surgeries including myomectomies, hysterectomies, classical repair and laparoscopy.
7. Emergency shifts were twice weekly each for 24 hours, allowing me to manage most of the OB/GYN emergencies. I was trained to manage labor in all presentations and different circumstances. I delivered more than 5000 patient and performed more than 2000 caesarean sections in addition to other emergency procedures as managing complicated ovarian cysts or disturbed ectopic pregnancies.

Assistant lecturer and specialist in Obstetrics and Gynecology (Assiut University, July 2012-Present):

During these years, I gained considerable experience in:

1. Performing and interpreting diagnostic and operative laparoscopy and hysteroscopy.
2. Obstetric and gynecologic ultrasound.
