

Article

Predator efficacy and attraction to herbivore-induced volatiles determine insect pest selection of inferior host plant

Mohammed A. Khallaf, Medhat M. Sadek, Peter Anderson

mohammed.khallaf@mdc-berlin.de (M.A.K.)
m.sadek@aun.edu.eg (M.M.S.)
peter.anderson@slu.se (P.A.)

Highlights

An herbivore prefers to oviposit on a plant that provides less favorable development

A predator is more successful in finding the herbivore on the non-preferred plant

The predator is more attracted to herbivore-induced odors of the non-preferred plant
